EXPERIENCE

Elite Technologies Energy LTD

I.T Officer | 🗓 February 2026 – present

- Configured, maintained, and monitored the company's internal network infrastructure to support daily operations and ensure system reliability.
- Designed and implemented workflow automations using n8n for communication, task management, document processing, and operational efficiency.
- Developed and deployed internal tools and automation systems using JavaScript to improve productivity across departments.
- Set up and managed a Nextcloud private cloud service for secure internal file storage, sharing, and document management.
- Conducted DevOps and infrastructure management tasks, including administration of the company's VPS environments and on-premises physical servers.
- Implemented, maintained, and optimized PostgreSQL databases to improve system performance, reliability, and data management.
- Automated data analytics workflows for solar installation systems using n8n, enabling efficient data collection and processing.
- Developed internal automation bots to improve cross-department communication and workflow coordination.
- Provided day-to-day IT support, including troubleshooting, maintenance, and user support to ensure continuous operation of company IT systems.
- Stack: JavaScript, Python, SQL, PostgreSQL, n8n, Nextcloud, Linux, VPS Management.

Aurora OS (Russia)

Intern Backend Developer | 🗓 January 2024 – August 2024

- Developed a location-based service (LBS) for the Aurora operating system.
- Designed and implemented the database to store cell tower data and optimized the database to improve cell tower retrieval speeds.
- Handled the development operations of CI/CD by setting up automated unit tests, employing linters to ensure the code adhered to coding standards, helping to ensure clean, consistent, and error-free code.
- Documented the codebase comprehensively by detailing the main setup and functionality ensuring easy understanding of the project and facilitating contributions. Additionally, I documented the project's architecture with diagrams illustrating module interactions for enhanced clarity.
- Stack worked with: Python, Flask, Postgres, GitHub Actions, C++.

Innopolis Labs (Russia, Remote)

Intern Software Engineer | 🗓 July 2024 – September 2024

- Worked on documenting and testing CheetahML - a platform for deploying and running AI models.
- Revised and optimized the platform's architecture to ensure compatibility with Kubernetes.
- Set up the environment for performance testing.
- Conducted performance testing and evaluated the system's performance based on its current architecture.
- Proposed architectural changes to enable dynamic resource allocation in a running system by redistributing resources between models, resulting in over a 12% decrease in response times.
- Stack worked with: Python, Docker, Kubernetes, Prometheus, Grafana.

NeoFlex (Russia)

Software Engineer Intern | 🗓 February 2023 – July 2023

- Designed and Implemented an API for a shopping mobile application using Spring Boot resulting in sub 300 ms API response times.
- Designed the database and administered it throughout the project's lifespan resulting in optimal data retrieval and write times.
- Stack worked with: Java, Spring, Postgres.

EDUCATION

Master of Science (M.S.) in Computer Science and Computer Engineering, September 2023 – August 2025

[Innopolis University](#), Innopolis, Russia

Relevant coursework: Vehicle Traffic Analysis using computer vision, Software Development processes and methodologies, Team management, Requirements Engineering, Continuous Integration and Deployment, Agile methodologies. Worked in several group projects where I was a team leader and system architect and foresaw the software development processes.

Bachelor of Science (B.S.) in Mathematical Software and Administration of Information Systems, September 2019 - August 2023

[Voronezh State University](#), Voronezh, Russia

Relevant coursework: Phase Direction Finder and Radio Waves Simulation, Data Structures and Algorithms. Developed proficiency in various programming languages, including C++, C#, Java, Python, and SQL through my various coursework's and practical projects.

Grade 12 High School Certificate, 2012-2016

St Paul's Mulungushi Secondary School

SKILLS

Programming Languages: Java, Python, C#, SQL, JavaScript

Databases: PostgreSQL, Oracle DB

Frameworks and other tools: Spring Boot, Kafka, Redis, RabbitMQ, React JS, Flask, Fast API, Git, Rest API, Docker, Kubernetes, Junit, HTML, CSS

CI/CD: GitHub Actions

Software Engineering Processes: Agile, Scrum, Requirements Elicitation and Specification, Architecture Design, Unit Testing

Soft Skills: Team player & Leader, Good communicator, Problem solver and highly analytical

Other notable achievements

Published and presented a paper at the 29th International Conference on Image Processing, Computer Vision, & Pattern Recognition (ICPV2025) (An Overview of Real-Time Computer Vision-Based Traffic Analysis Systems).

Member of the Information and Communications Technology Association of Zambia (**ICTAZ**) and holder of a valid **ICTAZ** practicing license.
